

How to install Discover in Ubuntu 20.04?

Rogelio Prieto Alvarado

March, 2021

Problem:

You compiled Discover using `make all`, you get this error:

```
make: *** [Makefile:288: install-recursive] Error 1
```

Solution:

Compile using gcc 4.x version.

Step by step:

1. Install requirements:

```
sudo apt-get install libjemalloc-dev
```

2. Install samtools (required if using bam files) **ESTE PASO NO LO HE PROBADO**

```
$ sudo apt-get install samtools
```

3. Add a repository. Open the file:

```
$ sudo gedit /etc/apt/sources.list
```

4. Add these lines, preferably at the end of the file.

```
#RPA ADDED  
deb http://us.archive.ubuntu.com/ubuntu bionic main universe
```

5. Install gcc and g++ 4.8 version. Open a Terminal and execute:

```
$ sudo apt upgrade && apt install gcc-4.8 g++-4.8
```

6. Configure multiple GCC versions.

```
$ sudo update-alternatives --install /usr/bin/gcc gcc /usr/bin/gcc-4.8 40 \  
--slave /usr/bin/g++ g++ /usr/bin/g++-4.8
```

```
$ sudo update-alternatives --install /usr/bin/gcc gcc /usr/bin/gcc-9 90 \
--slave /usr/bin/g++ g++ /usr/bin/g++-9
```

7. Choose 4.8 versiont. Type in Terminal:

```
$ sudo update-alternatives --config gcc
```

8. Install Discover. Open the INSTALL file and follow the instructions. A short way:

```
tar xzf discovardenovo-NNNNN.tar.gz
cd discovardenovo-NNNNN
cd discovardenovo-52488/
./configure
make all
make install
```

where NNNNN is the Discover version, in this example 52488 is the version.

9. Delete the repository url. Open the file and delete the last two lines added in previously step.

```
$ sudo gedit /etc/apt/sources.list
```

This step is necessary for stopping using a previous Ubuntu repository version.
